## Quantum Blocks SMP Server - Mod Download Help Guide

[smp.qbmc.us](https://smp.qbmc.us)

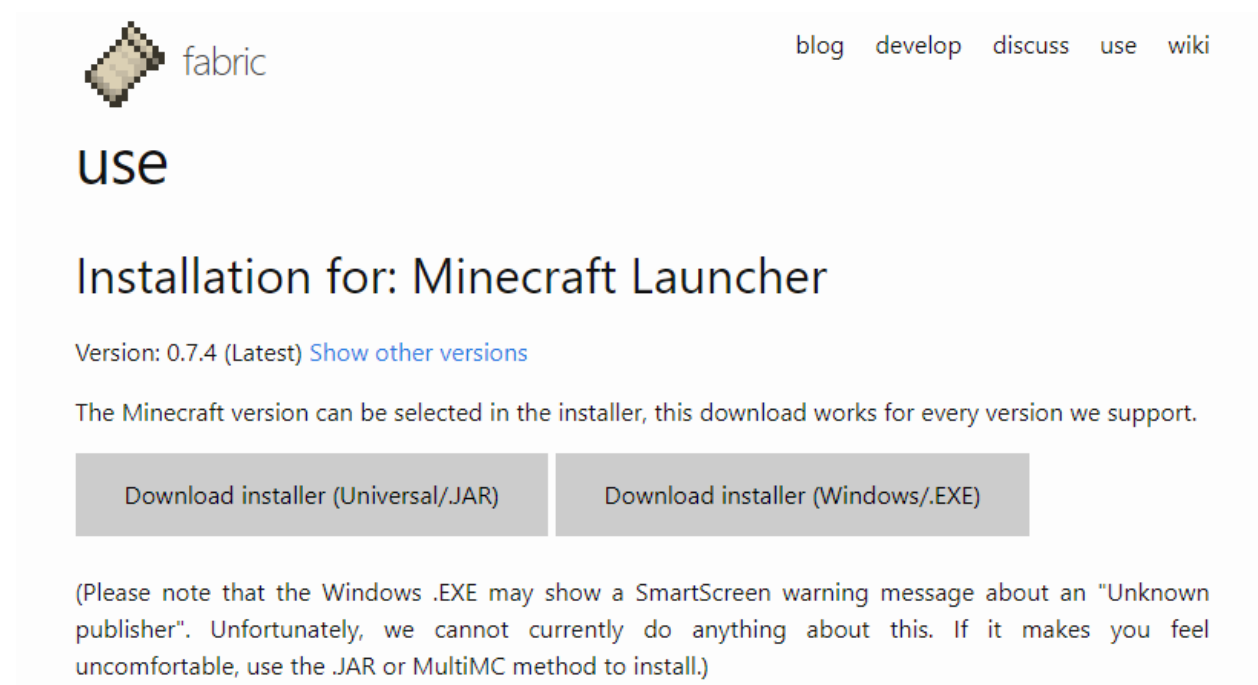

To be able to play on the Quantum SMP, it is important to be using the correct mods and launcher version to be able to successfully join the server.

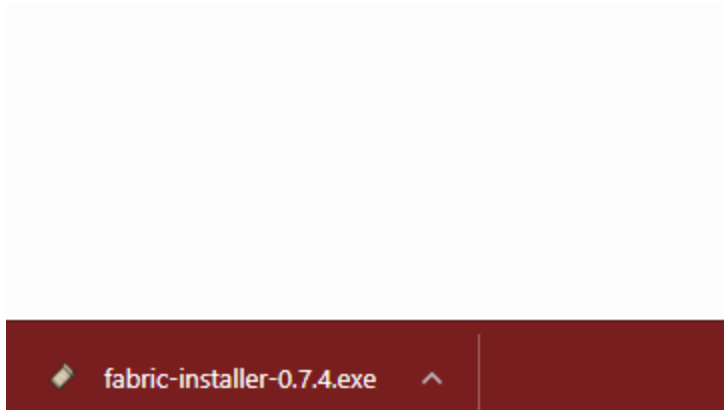

## **Fabric Launcher**

The first thing you will need to download is the Fabric Launcher which can be found here:  
<https://fabricmc.net/use/>

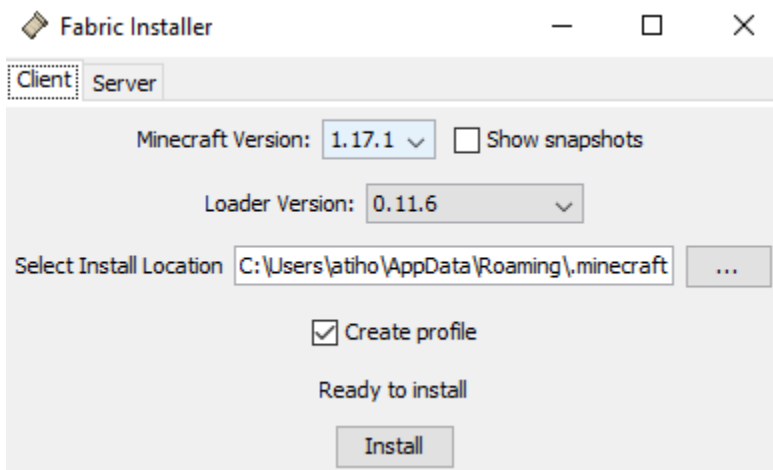

Next you will need to make sure you are downloading the 0.7.4 version of the launcher. Then, click the downloader which suits your computer the best (It is recommended to use Universal/.jar for any non-Windows system).

The screenshot shows the 'use' page of the Fabric MC website. At the top left is the Fabric logo, a diamond shape made of smaller diamonds. To its right is the word 'fabric' in a lowercase, sans-serif font. Further right are navigation links: 'blog', 'develop', 'discuss', 'use', and 'wiki'. Below the logo and navigation is the word 'use' in a large, bold, lowercase font. Underneath 'use' is the heading 'Installation for: Minecraft Launcher'. Below this heading is the text 'Version: 0.7.4 (Latest)' followed by a link 'Show other versions'. Below that is a paragraph: 'The Minecraft version can be selected in the installer, this download works for every version we support.' Below the paragraph are two buttons: 'Download installer (Universal/.JAR)' and 'Download installer (Windows/.EXE)'. Below the buttons is a note in parentheses: '(Please note that the Windows .EXE may show a SmartScreen warning message about an "Unknown publisher". Unfortunately, we cannot currently do anything about this. If it makes you feel uncomfortable, use the .JAR or MultiMC method to install.)'

Once it is finished downloading, double click this file (or the one in your computer's download folder).

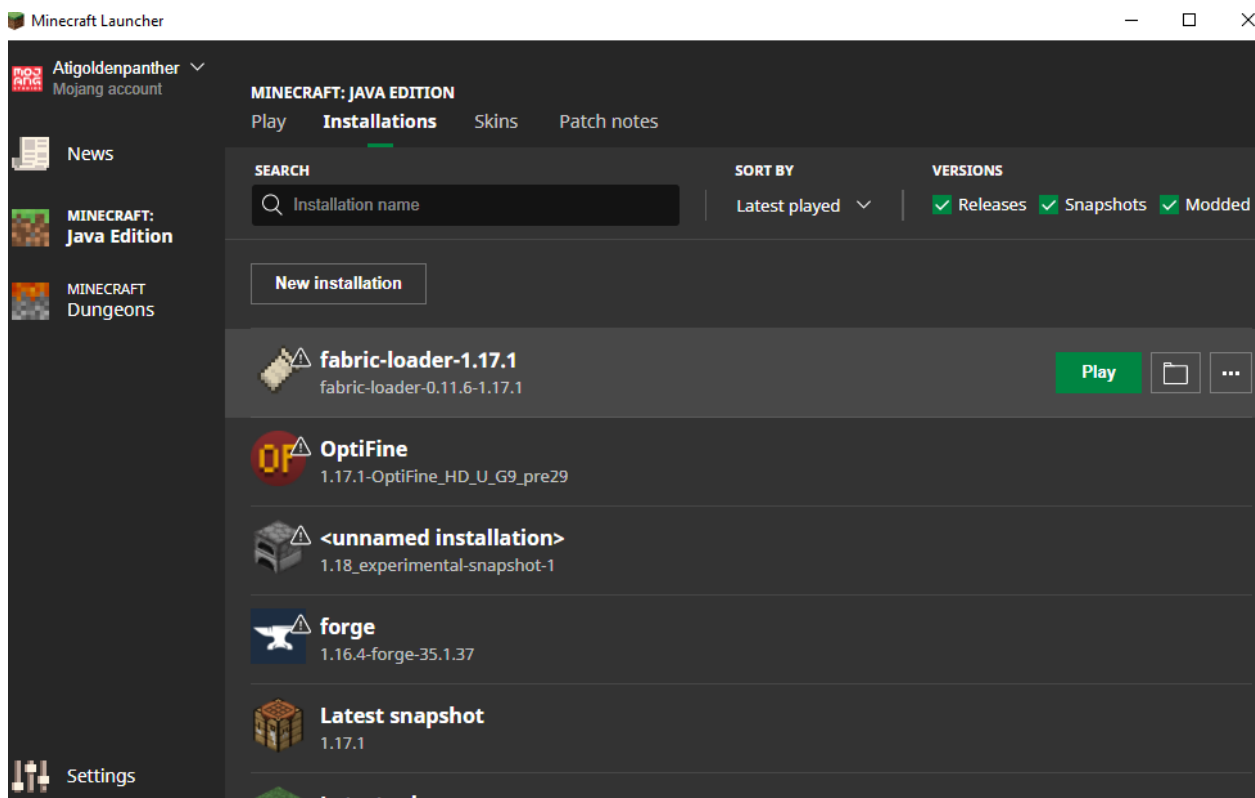

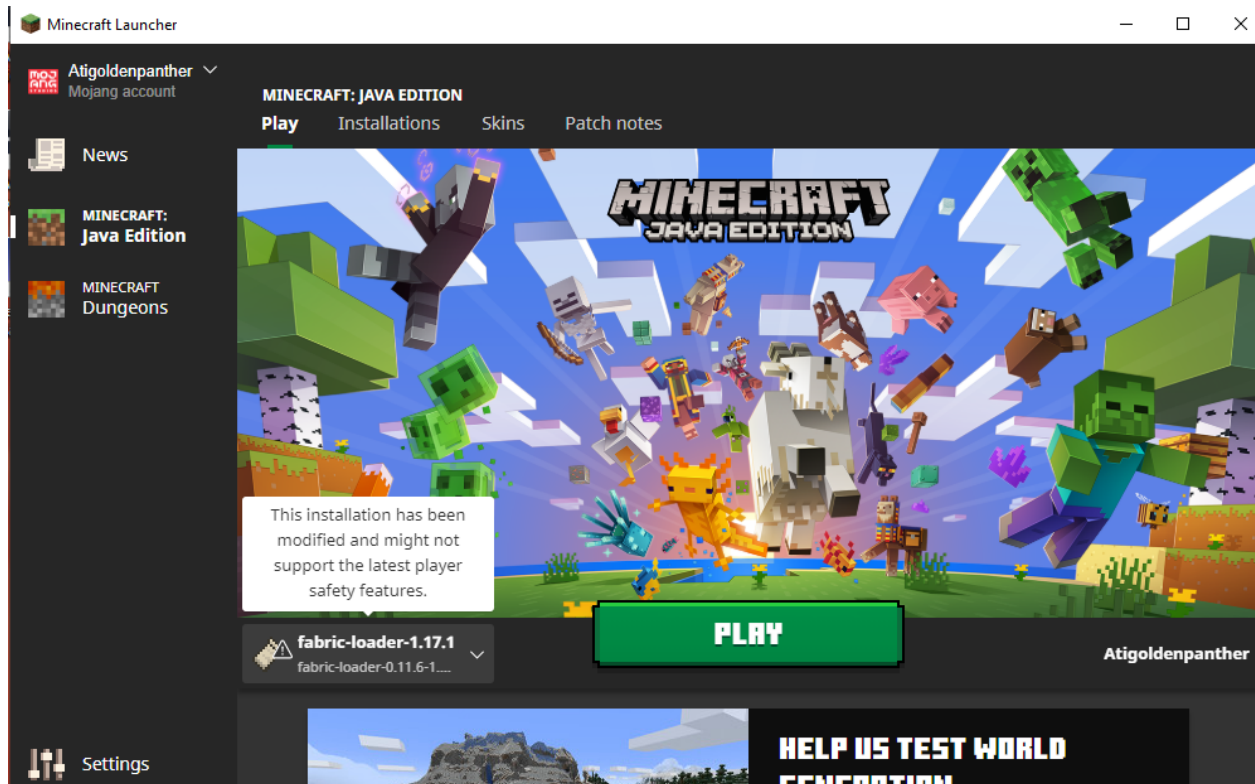

Once this window pops up:

make sure the minecraft version is 1.17.1. then click install.

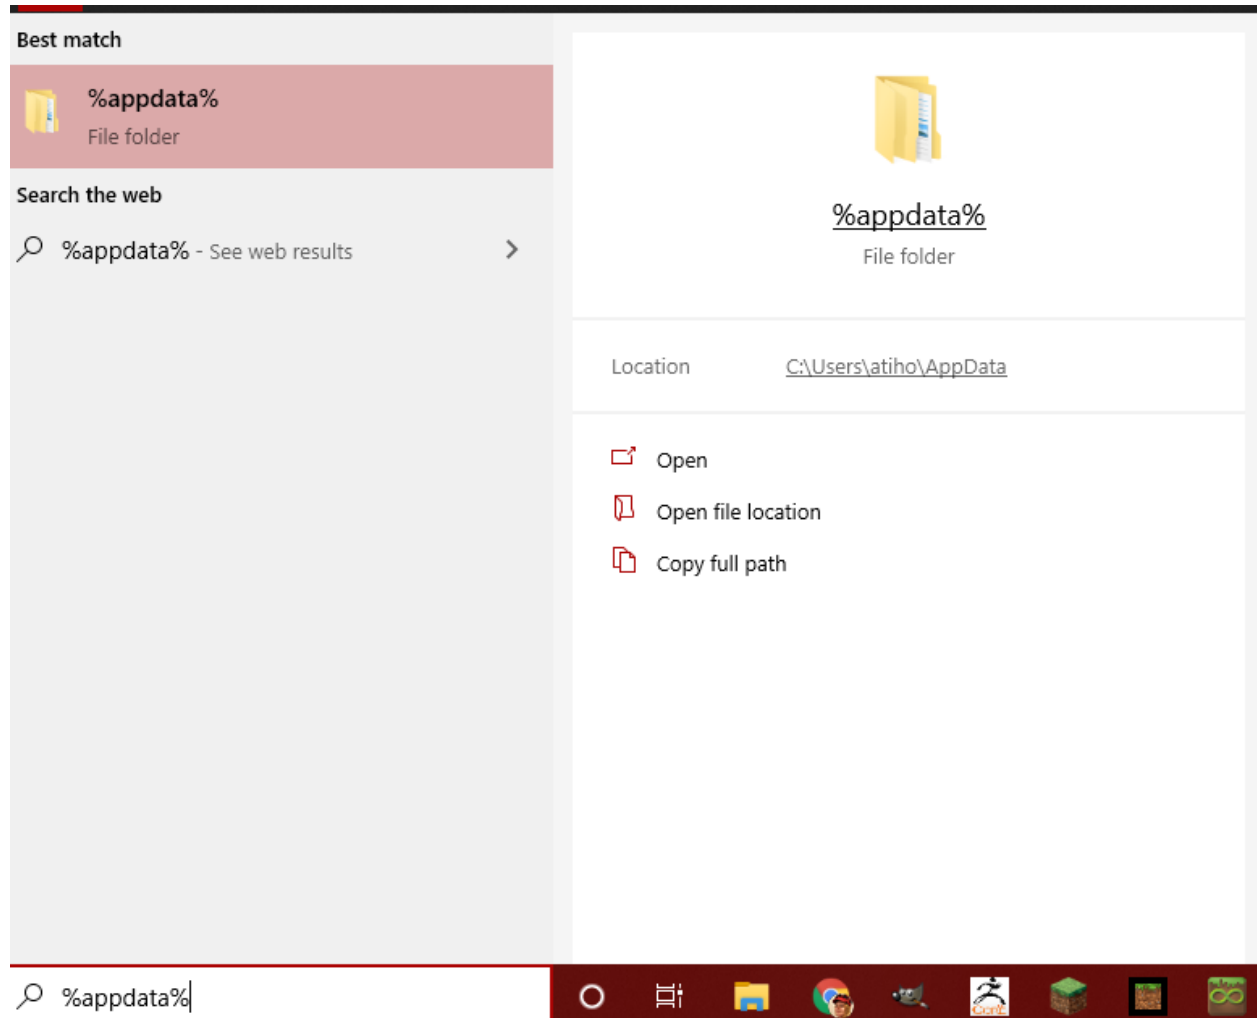

Now you just need to open your minecraft launcher and go into Installations. Click the plus button to make a new installation, and search for Fabric 1.17.1 launcher.

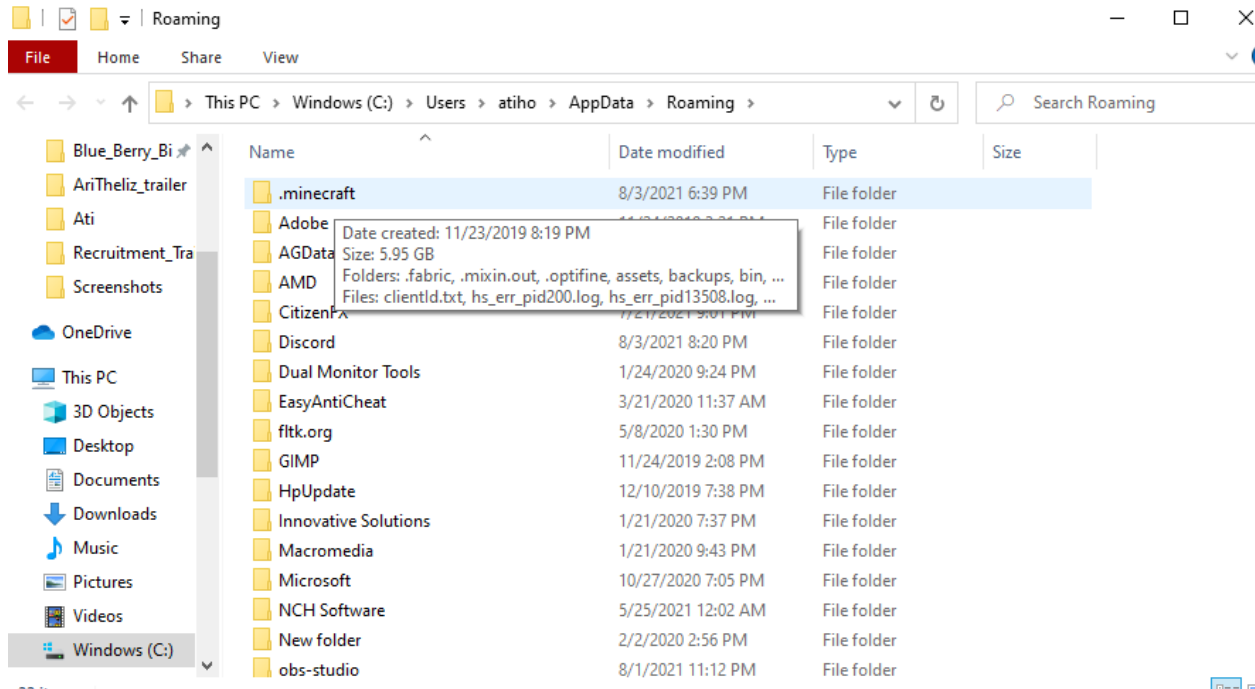

## Fabric API

Before we get into the mods, it is important to make sure you have your .minecraft/mods folder opened.

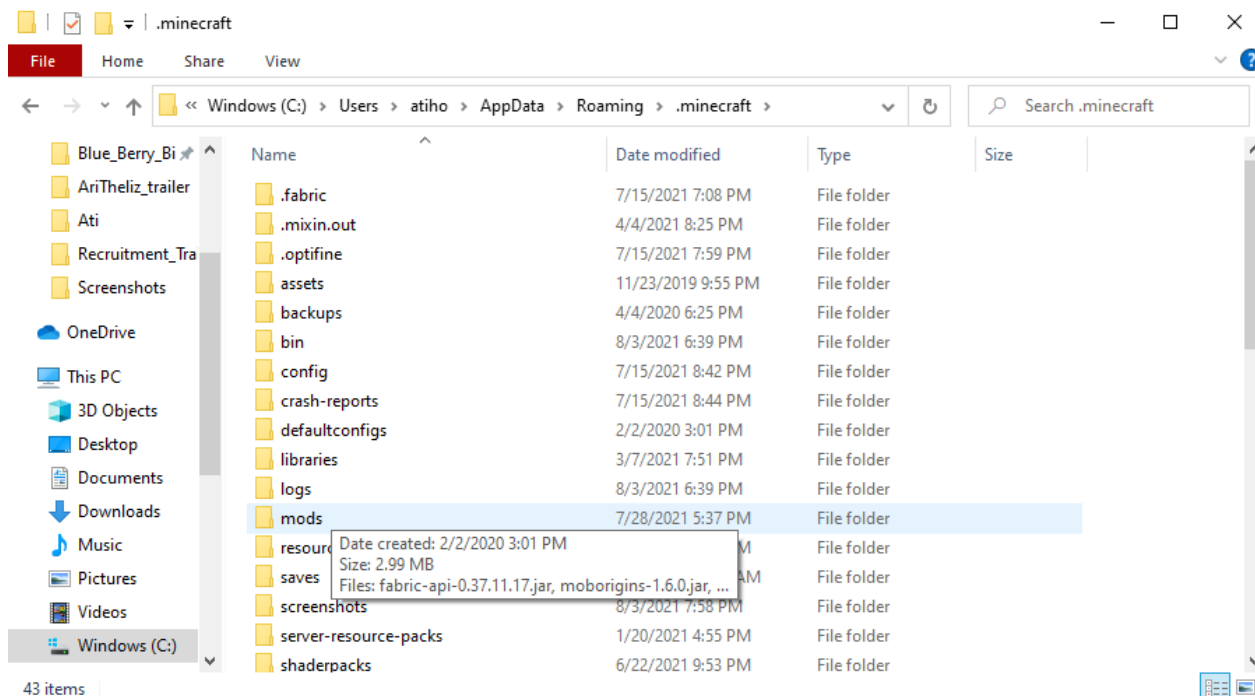

To do this, type in your computer's search bar: %appdata%. This will bring up all of your system files.

In that list you should see a folder labeled .minecraft. Inside there should be a folder labeled mods.

If there is no folder labeled mods, simply create a new folder and rename it to mods. Specifically typed all in lowercase. You will need to leave this mods folder open for the next part.

"Fabric API is the core library for the most common hooks and intercompatibility measures utilized by mods using the Fabric toolchain..." - Fabric API, Curseforge.com

You can find this important extension of the fabric launcher here:

<https://www.curseforge.com/minecraft/mc-mods/fabric-api/files>

Find the Fabric API 0.37.1 posted on July 23rd 2021 and click the orange arrow to the right to download:

### Changelog

Apoli and Calio changes are listed if they are relevant to Origins. They will be marked with an [A] or a [C] at the beginning, while changes to Origins will be marked with [O]. These details should be mostly irrelevant to the regular user, so feel free to ignore them. :)

### Misc Changes

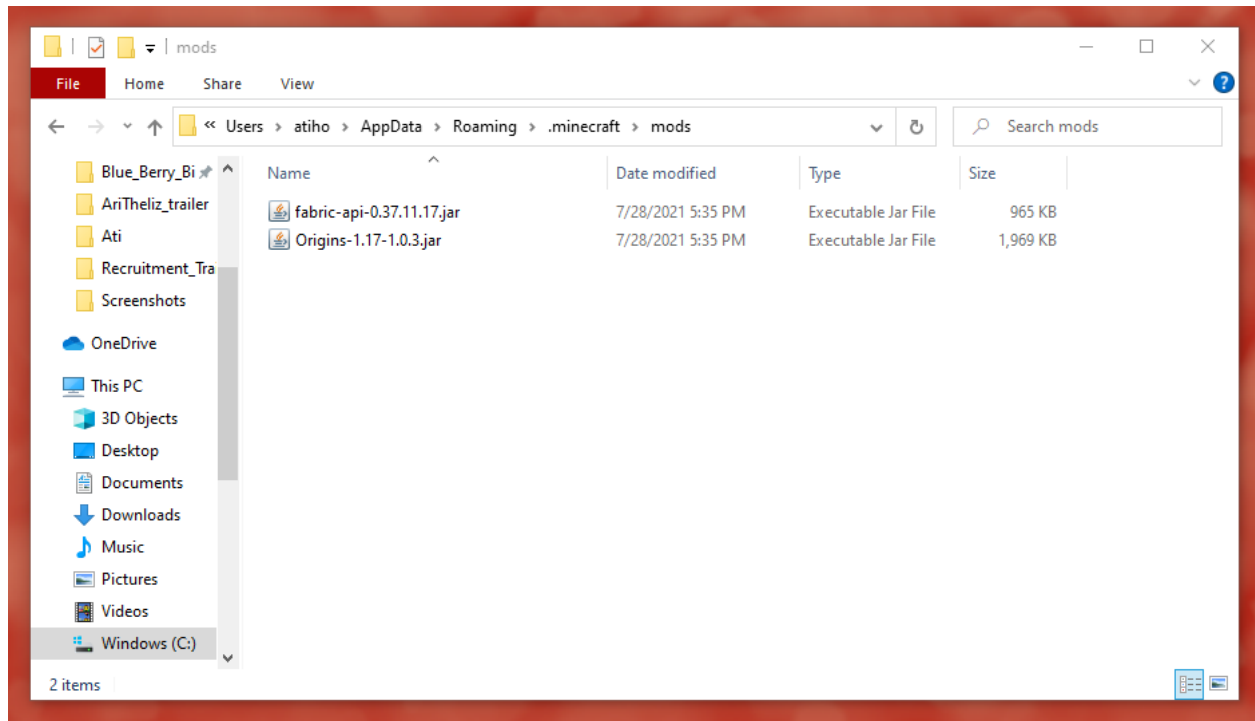

- \* [A] Removed the inability to equip an elytra when an `elytra\_flight` power is active
- \* [A] Changed order of execution of actions in `action\_over\_time` power. `rising\_action` now executes before the first `entity\_action` tick
- \* [O] Added a clause that shows that Origins is incompatible with version of Identity older than 1.14.2-beta
- \* [O] Updated the "breaks OptiFabric" clause to only be valid up to the current version, in case the OptiFabric devs update their mod to fix the incompatibility issues

Once it is downloaded copy it from your downloads folder and paste it into the mods folder. Now that you have all three mods downloaded it should look something like this:

Finally you should be all set to join the server and jump into the game. We can't wait to see you there!
